Precision Pulse Control
The PCM-7140 is a compact pulsed current source designed to drive laser diodes, bars, arrays, or any low-impedance load. The key specifications are output current from 0.1 A to 1 A, rise and fall times below 1 µs at 1 A, pulse widths from 1 µs to 100% duty cycle, pulse repetition rates from single shot to 100 KHz, and forward voltage from 0 V to 60 V.

System Operation
The PCM-7140 output current may be set with an internal potentiometer or an external analog voltage. The pulse width and frequency is controlled with an external trigger source.

The system requires two DC power supplies for operation: 12 VDC for housekeeping and a high voltage power supply with voltage \( \leq 10 \) VDC above the laser diode’s forward voltage.

Input / Output Cable
The laser or load is connected to the PCM-7140 with a 100 cm length of 18 AWG twisted pair cable (included). This same cable has the DC input connection from the high voltage power supply.

Liquid Cooling
The PCM-7140 module is liquid cooled with a liquid temperature of 11 °C to 22 °C with a flow rate of 6 liters per minute. The connection type is 3/8" tubing.
